### DETAILED ACTION

In response to the amendment filed 7/1/2004 all the amendments to the claims have been entered and the action follows:

#### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-39 are rejected under 35 U.S.C. 103(a) as being unpatentable over Addiego in view of Levy et al (US 4579455) and in further view of Solomon et al (US 6178223).

With respect to claims 1-39, the rejections are maintained and incorporated by references as set forth in the prior office action paper # 13. Furthermore, Addiego also discloses the desired images selected from the images corresponding to the scanned areas of the device, (see col. 8, lines 58-65, the images are the one that are to be inspected, and the inspected images are read as the desired images) as claimed. However, Addiego and Levy fail to disclose the desired scanned images being selected by a user, as claimed. Solomon teaches a system where a user selects two images in

order to compare them (see col. 19, lines 35-37 and 48-51) as claimed. It would have been obvious to one ordinary skilled in the art at the time of invention to simply use the teachings of Solomon of user selection of two images two compare and incorporate in to the Addiego and Levy system. As it is known in the field as in the state of technology that machine selection of the images came later then the user selection of images in order to compare. Also, the motivation of doing this would be to be able to get the correct coordinates of the image (see col. 19, line 49 of Solomon).

### ***Response to Arguments***

3. Applicant's arguments with respect to claims 1-39 have been considered but are moot in view of the new ground(s) of rejection.
